

Pre-lab exercise for Lab 4 - OSPF

Instructions

All the answers to the pre-lab questions can be found in the material from Module 2, which is available on NetAcad. Additionally, you should have access to a walk-through of the material in sections 2.3-2.4 that is posted on BrightSpace (check Content, Lectures).

One or two questions may require you to extend your knowledge slightly by using a search engine (e.g. Duck-Duck-Go) to get the required info.

For those who are extra motivated, you can verify the answers by setting up a suitable 2-node network running OSPF on NetLab e.g. the same setup used for Post-lab 2.

Although you're using Cisco equipment exclusively, please know that **all network vendors** implement the same features for OSPF. So we're really trying to learn about OSPF rather than simply "Cisco".

Good luck.
